Your Guide to the

Electricity Service Tariff

A simple explanation of what has changed regarding the Electricity Service Tariff, with answers to your questions about the adjustment and the applicable tariffs.

Implementation of the Electricity Service Tariff Adjustment

The new electricity service tariff will be effective as of 01/01/2027.

and applies to the following categories:

01
Residential

02
Commercial sector, Private healthcare facilities, private institutions, establishments and schools

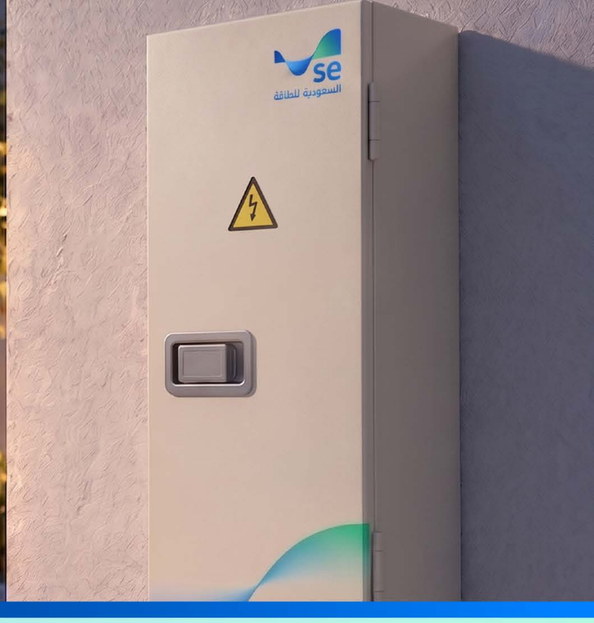

03
Agricultural

04
Industrial

05
Government

06
Charitable foundations

What Has Changed?

	Consumption tariff	Meter reading, maintenance and billing tariff
Residential Sector	• No changes to the consumption slab. • The tariff rate for each tier has been adjusted.	• The "Meter Reading, Maintenance and Billing Tariff" has been replaced with the "Fixed Tariff". • The Fixed Tariff is determined based on circuit breaker capacity.
Commercial Sector	• No changes to the consumption slab. • The tariff rate for each tier has been adjusted.	• The "Meter Reading, Maintenance and Billing Tariff" has been replaced with the "Fixed Tariff". • The Fixed Tariff is determined based on circuit breaker capacity.
Private health facilities - institutions and private schools	• The consumption sector consisting of private health facilities and private schools, institutes, and establishments have been been adjusted to commercial sector. • The tariff rate for each tier has been adjusted.	• The "Meter Reading, Maintenance and Billing Tariff" has been replaced with the "Fixed Tariff". • The Fixed Tariff is determined based on circuit breaker capacity.
Agricultural Sector	• No changes to the consumption slab. • The tariff rate for each tier has been adjusted.	• The "Meter Reading, Maintenance and Billing Tariff" has been replaced with the "Fixed Tariff". • The Fixed Tariff is determined based on circuit breaker capacity.
Industrial Sector	• The consumption tariff has been adjusted.	• The "Meter Reading, Maintenance and Billing Tariff" has been replaced with the "Fixed Tariff". • The Fixed Tariff is determined based on circuit breaker capacity.
Government Sector	• The consumption tariff has been adjusted.	• The "Meter Reading, Maintenance and Billing Tariff" has been replaced with the "Fixed Tariff". • The Fixed Tariff is determined based on circuit breaker capacity.
Charitable Foundations	• No changes to the consumption slab. • The tariff rate for each tier has been adjusted.	• The "Meter Reading, Maintenance and Billing Tariff" has been replaced with the "Fixed Tariff". • The Fixed Tariff is determined based on circuit breaker capacity.

Details of the Tariff Changes

Residential Sector

Electricity Consumption Tariff	
Monthly consumption	Tariff*
1–6,000 kWh	**21** halalas/kWh
Above **6,000** kWh	**33** halalas/kWh

Fixed Tariff	
Breaker Capacity	Tariff*
20 to less than **100** amperes	﷼ **70**/month
100 to less than **200** amperes	﷼ **80**/month
200 to less than **300** amperes	﷼ **90**/month
300 amperes or more	﷼ **100**/month

*Excluding Value Added Tax (VAT).

Commercial sector, Private healthcare facilities, private institutions, establishments and schools

Electricity Consumption Tariff	
Monthly consumption	Tariff*
1–6,000 kWh	**25** halalas/kWh
Above **6,000** kWh	**35** halalas/kWh

Fixed Tariff	
Breaker Capacity	Tariff*
20 to less than **100** amperes	﷼ **350**/month
100 to less than **200** amperes	﷼ **500**/month
200 to less than **300** amperes	﷼ **700**/month
300 amperes or more	﷼ **900**/month

*Excluding Value Added Tax (VAT).

Updated Tariff

Agricultural Sector

Electricity Consumption Tariff	
Monthly consumption	Tariff*
1–6,000 kWh	**19** halalas/kWh
Above **6,000** kWh	**23** halalas/kWh

Fixed Tariff	
Breaker Capacity	Tariff*
20 to less than **100** amperes	﷼ **140**/month
100 to less than **200** amperes	﷼ **160**/month
200 to less than **300** amperes	﷼ **180**/month
300 amperes or more	﷼ **200**/month

*Excluding Value Added Tax (VAT).

Industrial Sector

Electricity Consumption Tariff	
Monthly consumption	Tariff*
All consumption (kWh)	**23** halalas/kWh

Fixed Tariff	
Breaker Capacity	Tariff*
20 to less than **100** amperes	﷼ **350**/month
100 to less than **200** amperes	﷼ **500**/month
200 to less than **300** amperes	﷼ **700**/month
300 amperes or more	﷼ **900**/month

*Excluding Value Added Tax (VAT).

Details of the Tariff Changes

Government Sector

Electricity Consumption Tariff	
Monthly consumption	Tariff*
All consumption (kWh)	**35** halalas/kWh

Fixed Tariff	
Breaker Capacity	Tariff*
20 to less than **100** amperes	﷼ **350**/month
100 to less than **200** amperes	﷼ **500**/month
200 to less than **300** amperes	﷼ **700**/month
300 amperes or more	﷼ **900**/month

*Excluding Value Added Tax (VAT).

Charitable Foundations

Electricity Consumption Tariff	
Monthly consumption	Tariff*
1–6,000 kWh	**17** halalas/kWh
Above **6,000** kWh	**21** halalas/kWh

Fixed Tariff	
Breaker Capacity	Tariff*
20 to less than **100** amperes	﷼ **140**/month
100 to less than **200** amperes	﷼ **160**/month
200 to less than **300** amperes	﷼ **180**/month
300 amperes or more	﷼ **200**/month

*Excluding Value Added Tax (VAT).

What is the difference between the fixed tariff and the consumption tariff?

Consumption tariff:
The approved fee for monthly consumption (Halalah / kWh).

Fixed Tariff:
The approved fee based on breaker capacity and consumption category.

How can I know the breaker capacity?

You can learn your breaker capacity via:

The Saudi Energy App

Monthly bill.

After the Tariff Adjustment...
Will you be charged both the “Fixed Tariff” and the “Meter Service” fee each month?

No, after the adjustment is applied, your bill will consist of the Consumption Tariff and the Fixed Tariff.

Important Information

Both tariffs may appear on the same bill only once, when the tariff adjustment first takes effect. This may happen if your billing period includes days before and after the adjustment takes effect. In this case, each period will be calculated using the tariff applicable at that time.

How will the fixed tariff be calculated if the bill was issued for a time period that is more than or less than 30 days?

If the consumption period for the bill was more than or less than 30 days, the fixed tariff will be calculated according to the days of the time period as follows:

Fixed tariff × bill days ÷ 30

Key Principle

The Fixed Tariff is calculated proportionally based on the number of days in your billing period.

Does the breaker capacity affect electricity consumption?

Breaker capacity:
Determines the amount of electrical loads you can activate at the same time.

Electricity consumption quantity:
The amount of electrical energy consumed within a specific time period, which depends on the power of electrical devices and the time of operating them.

Therefore, the increase in breaker capacity does not necessarily mean an increase in electricity consumption. The same applies to decreasing the breaker capacity, which does not necessarily mean a decrease in consumption.

How will my bill be calculated if it includes days within the old tariffs and days within the new tariffs?

Any consumption before 01/01/2027 will be calculated according to the old tariffs.

Any consumption on and after 01/01/2027 will be calculated according to the new tariffs.

Are the announced tariff prices inclusive of value-added tax (VAT)?

The announced tariff prices do not include VAT.
VAT will be added to the bill.
